

MySQL Slow Query Postmortem

Incident: payment-service checkout latency and payment timeout spike.

Incident window: 2026-07-06 10:05-10:24 UTC.

Evidence: slow_queries=18, active_connections=188/200, pool_waiting=6.

Deploy context: payment-api-2026.07.06-rc3 changed checkout query loading.

Loki logs showed checkout timeout and slow SQL digest payment_report_join_v3.

Root cause: slow SQL held MySQL connections and created application pool waiting.

Remediation boundary: SQL rewrite, index change, pool config, or restart requires human approval and a production change window.
